

XIAO pins as in `zmk/boards/shields/rollino/rollino.overlay`; NCS/MOTION _R = right sensor (J1), _L = left (J2)

J1/J2 (FPC): 1 +3V3, 2 GND, 3 SCLK, 4 SDIO, 5 NCS, 6 MOTION – or reversed, so each signal meets itself through the ribbon

SDIO goes to both SPI MOSI (D10) and MISO: the firmware puts them on the same pin

FPC connectors to the two sensor boards, pads for optional buttons.
XIAO nRF52840 soldered upside down (parts through the cutout),
